Integrated Postal Architecture
Asset Management

Precision Postal Software Design

IPA CORVUS manages the assets of a Post in a multi-tiered fashion in a similar method to that used by the Central Consolidation module.

The IPA Asset Manager, manages both "value-stock" and selected items of "non value-stock" of a Postal Enterprise, from the counter level, through the post office level, to optional regional levels and through to the central inventory management.

The *CORVUS* Asset Manager is responsible for the management of all stock and cash levels and movements throughout the Postal Enterprise. Cash is viewed as a value-stock item and certain management characteristics are common with the stock management requirements.

As well as managing the movements of assets throughout the Enterprise, the Asset Manager can also raise orders on suppliers at any level, with the appropriate authorisation, and manage the purchase ordering and taking into stock of deliveries from suppliers.

Overview

The Asset Manager uses the transaction manager in order to manage the movements of cash, retail stock items, stamps, philatelic supplies and other value stock and non-value stock items. The asset manager can reconcile all declared assets at:

⇒ The counter / clerk level

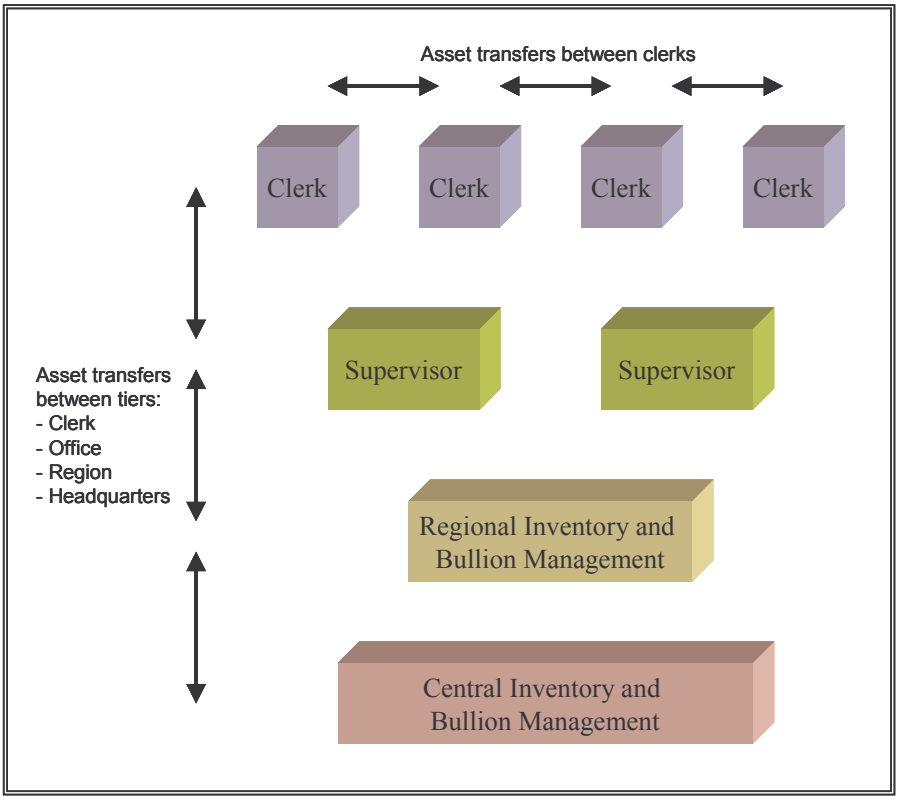

⇒ The post office branch administration level

⇒ The central and regional bullion centre

⇒ The central and regional inventory centre

⇒ All movements between these levels

Asset Manager maintains the precise stock levels and re-order levels for all items of stock at each counter position, each post office and at each regional or central location. Detailed valued stamp stock is also maintained by denomination and by value.

Asset Types

Each inventory item is declared within an "Asset Type" for which the business rules are defined. These business rules may define:

⇒ Who is allowed to hold this type of stock;

⇒ Who can they transfer with;

⇒ What information is held about the items; etc.

Physical assets are recorded within "Asset Units" which are owned by each user, i.e. clerk asset unit, supervisor asset unit, etc.

Cash is held within the system as a specific "Asset Type" for which the relevant business rules are defined.

The structure of the system enables enquiries and reports by Asset Type or Asset Unit.
